Regional integration
Towards an inclusive value chain strategy

Lima, 7 May 2014
Introduction: time for production integration

• Integration is a multidimensional process encompassing economic, political, social, cultural and environmental issues.

• The document focuses specifically on the production dimension, identifying it as a strategic element of regional integration for the coming years.

• Central thesis: in order to move towards structural changes for equality, the region must forge closer regional production ties.

• Tackling inequality as well as social policies calls for a change in the production and export structure and the creation of good quality and progressively more sophisticated activities.

• The regional space is the most conducive to this transformation
The dynamics and emphasis of regional integration have changed greatly in the past decade.

Several Governments had a new vision of the type of integration that prevailed in the 1990s, especially the emphasis on commercial issues.

The political and social dimensions are reaffirmed as being of the utmost importance along with concern for achieving greater production integration.

New entities have emerged (CELAC, UNASUR, ALBA-TCP, the Pacific Alliance) in response to traditional integration schemes; multiple memberships add to the complexity of the institutional integration architecture.

Traditional deficiencies persist (sluggish intraregional trade and production integration), which coexist with growing de facto integration (investments, migration, tourism, etc.).
Special challenges to integration in the Caribbean

The Caribbean is different:

- The small size of the subregional market
- Heavy external debt burden. Fiscal and external disequilibria
- Lack of complementarity between the various economies
- High dependency on: (i) external markets and (ii) a limited range of commodities and services
- Island status, major challenges with connectivity
- Heightened vulnerability to natural disasters and environmental damage

In this context, the recommendations are as follows:

- Closer integration between CARICOM and Central America, Cuba, Dominican Republic and Panama given their strong complementarity
- Strengthened and coordinated cooperation towards the Caribbean from the rest of the region, defined within the framework of CELAC
A COMPLEX GLOBAL ECONOMIC ENVIRONMENT
As a group, the developing economies continue to grow the fastest and the gap with the developed countries has narrowed.

### WORLD AND SELECTED ECONOMIES: GDP VARIATION

Higher but modest growth rates in the developed countries

**United States:** Will grow by 2.8% in 2014 (versus 1.9% in 2013)

*Concern at the timing of the gradual withdrawal of quantitative easing, high public debt*

**Eurozone:** At the end of 2013 these countries emerged from a six-quarter-long recession, but are expected to grow by just 1.2% in 2014, with high levels of unemployment

*Concern at deflationary pressures and the complexities of the banking union*

**Japan:** Is experiencing growth of about 1.5% thanks to macro-heterodox policies and the devaluation of the yen

*The high public debt and scant advances with structural reforms remain a cause for concern*
The growth gap is narrowing: In 2014-2019, the difference between the average growth rate of the developed and developing countries (2.3% versus 5.3%) is expected to be the lowest since 2002.

Phasing out of quantitative easing in the United States

Slowdown in China as from 2012, due to lacklustre demand in the developed countries and the rebalancing of the growth model.

The external context is more challenging for the developing countries:
- Less liquidity (due to withdrawal of quantitative easing in the United States)
- Lower commodity prices (due to lower demand in China)
World trade has been sluggish although it is starting to recover

GROWTH IN THE VOLUME OF GOODS EXPORTS AND WORLD GDP, 2005-2015

(Annual percentage variation)

The figures for 2014 and 2015 are projections.
Impact of the global situation on Latin America and the Caribbean

Growth has been slowing since 2011 (2.5% in 2013)

- The slowdown has been marked: the region grew on average by 4.8% in 2003-2007 and 4.1% in 2010-2013
- Latin America and the Caribbean is expected to continue to be the developing region with the least dynamic performance in the period 2014-2019
- Exports slowed sharply in 2012 and 2013
- Increasing external vulnerability, reflected in a deterioration in the balance-of-payments current account position
- This brings to a close an international cycle that had been very favourable for the region, in particular for South America.
- In the coming years, greater emphasis will have to be placed on the regional market
With investment and net exports contributing little, GDP growth has depended to a great extent on growth in consumption.
Regional exports slowed sharply in 2012 and 2013

GLOBAL TRANSFORMATIONS ACCENTUATE THE NEED FOR REGIONAL INTEGRATION IN LATIN AMERICA AND THE CARIBBEAN
The region’s strengths and weaknesses as an international economic actor

**Strengths**
- Attractive and growing consumer market; expansion of the middle class
- Abundance of renewable and non-renewable natural resources

**Weaknesses**
- Limited involvement in the knowledge economy
- Strong emphasis on exports: (i) raw materials and assembly manufactures; (ii) a small number of large companies
- Limited internationalization of SMEs
In this context, the regional market plays a key role

For the large majority of Latin American and Caribbean countries, intraregional trade is qualitatively superior to exporting to other markets:

<table>
<thead>
<tr>
<th>It is the most conducive to export diversification as it absorbs the greatest number of export products</th>
<th>It is the main outlet for manufacturing exports</th>
<th>It is the main market for most export companies, especially SMEs</th>
<th>The region is the natural platform for growth of the trans-Latins and for the creation of plurinational production linkages</th>
</tr>
</thead>
</table>
Intraregional trade has made scant progress since its peak at the end of the 1990s

- 1 product / 1 destination: 36.1%
- From 2 products / 2 destinations to 3 products / 3 destinations: 25.4%
- From 4 products / 4 destinations to 10 products / 10 destinations: 25.4%
- 10 or more products / 10 destinations: 4.0%

Source: ECLAC, on the basis of official information from the customs services of the respective countries, OECD, World Bank and specialized studies.
Some examples of potential intraregional linkages

Central America and Mexico

**Agro-industry**
- Dairy
- Meat products
- Cereals and animal feed
- Fruit and vegetables
- Unmanufactured tobacco

**Metal products**
- Wire products
- Iron and aluminium structures
- Metal manufactures

**Metal manufactures**
- Precious metalwork
- Gold, silver and copper

**Agro-industry**
- Fruit and nuts
- Oilseeds
- Leather manufactures

**Chemical products**
- Polymers and copolymers
- Heterocyclic components
- Cosmetics
- Wood pulp

South America

Towards an inclusive value chain strategy
The region’s countries are already participating in a wide variety of service chains.

Bottlenecks in infrastructure constrain growth, competitiveness and equity

The region would need to spend 7.9% of annual GDP on infrastructure to close by 2020 the infrastructure gap measured in the region in 2005 compared with a group of growing economies in East Asia (Republic of Korea, Malaysia, Singapore and Hong Kong SAR).
## Dimensions that complement regional production integration

<table>

</tbody>
</table>

- **Environment**
  - Management of transboundary areas and shared ecosystems
  - Joint programmes on measuring and reducing the carbon footprint
  - Natural disaster risk management

- **Digital cooperation**
  - Concerted action to reduce the cost of broadband in the region
  - Regulatory harmonization on the Internet
  - Close the digital gap, with emphasis on remote areas and vulnerable sectors
  - Mass use of ICTs in health, education and SMEs

- **Social agenda**
  - Transboundary production programmes
  - Addressing growing intraregional migration: making migrants’ right and benefits in health and pensions portable; standardization of university curricula; certification of competencies
  - Close the digital gap, with emphasis on remote areas and vulnerable sectors
  - Mass use of ICTs in health, education and SMEs
  - Mainstreaming the gender dimension in all of these initiatives
AN INDUSTRIAL POLICY
FOR REGIONAL VALUE CHAINS
The role of an integrated regional market in fostering production linkages

1. The region has made substantial progress in reducing **tariff** barriers to intraregional trade

2. However, much less progress has been made on **regulatory** issues, which are key to modern value chains: investment, services, technical standards, trade facilitation, etc.

3. Critical issues:
   - Intellectual property
   - Government procurement and contracts
   - Gradual convergence

4. Some first steps could include:
   (i) Regional cumulation of origin;
   (ii) Harmonization and mutual recognition of technical and sanitary standards;
   (iii) Coordination of steps taken at the national level to facilitate trade (eg. single-window systems)

5. Support from Mexico, Colombia and the Bolivarian Republic of Venezuela to the Caribbean in strategic initiatives
The centrality of industrial policy

The region needs a modern industrial policy that fosters:

• Participation in regional and global value chains
• Moving up the chain hierarchy, transitioning to more sophisticated activities in goods and services

The promotion of regional value chains opens up scope for industrial policy with plurinational components

One area with great potential is support for the internationalization of SMEs through:

• Programmes to provide support in meeting the quality, safety, and sustainability requirements of their potential buyers
• Joint programmes for the development of specialized human resources
The centrality of industrial policy

Another area that has great potential is joint research and development of technology hubs in shared areas of interest:

Renewable energy, biotechnology applied to agriculture and mining, management of water resources, etc.

None of this means setting aside natural resources, rather it means adding knowledge and value, and strengthening linkages with the rest of the economy.
MAIN MESSAGES AND RECOMMENDATIONS
Ten recommendations for regional integration

1. The integration process must be regional in scope.
2. Significant transboundary and subregional components must also be recognized.
3. The convergence between integration schemes is necessary, but it will be a gradual, non-linear process.
4. There is no single or best model of integration, so plenty of flexibility is needed in designing the emerging regional space.
5. The commitment and political will to converge towards an integrated regional space is indispensable.
Ten recommendations for regional integration

6. Value chains and public policies to promote them can be a powerful instrument for regional integration

7. A common agenda for the near term is a good starting point

8. Integration must rely more on civil society

9. Equality must be the hallmark of regional integration

10. Integration must be regarded as a State policy
